SURVEILLUS

## **Review** Workstation Client Application

OVERVIEW

The Surveillus Review client application offers users an intuitive and easy to use tool for viewing live or pre-recorded video. Instantly transition between live feeds and recorded footage at any time with the quick button click or key press. The application is fast and highly reliable. Review offers full DVR controls with comprehensive date and time search functions that enable users to quickly find specific recordings as needed. Review™ includes high speed rewind and fast forward, slow forward/reverse playback, and synchronized playback of up to 4 streams. This application is suited for high resolution & high frame rate live video viewing and pre-recorded video review. The powerful camera history manager provides a full display of all activity and bit rate details for any camera stream. The video browser feature provides thumbnail views of recorded video. Rapidly find the information you need by selecting a display in increments between "every 12 hours" all the way down to "every second" for a specified range of time. Review allows exporting video individually or in groups of four cameras, and in a storyboard format.
