

LPR Search Add-On Application

OVERVIEW

The Surveillus LPR Service provides integrated automatic license plate recognition and vehicle recognition within the Surveillus Enterprise Video Management System. The service provides powerful event display and search functionality within the Review Client application. This includes plate/vehicle data, plate images and full vehicle images from events. LPR service runs on a Surveillus Application Unit which supports multiple IP camera streams. Application units allow simple configuration via an intuitive browser interface. Easily create multiple watchlists. Each watchlist can include automatic event responses. Event responses can be configured to automatically call up live video onto specific monitors, send alerts to matrix keyboards and add bookmarks to recording history for watchlist events.

FEATURES

- Highly accurate automatic license plate recognition
- Fully integrated with Surveillus Enterprise VMS
- State & Regional vehicle recognition
- Vehicle make and color recognition
- Multiple Watchlists for monitoring of wanted and/or unwanted vehicle access at your facility
- Quickly search and filter events based on:
 - Specific watchlist member
 - Full or partial plate information
 - Vehicle make or color
 - Vehicle state or region
 - Date and time frame
 - Specific LPR cameras or lanes
