

OVERVIEW

The Surveillus Keyboard Interface Kit provides integration of legacy CCTV keyboards into the Surveillus Enterprise Video Management Systems. These kits allow full VMS controls via traditional serial communication-based CCTV keyboards. The interface kit allow keyboards to work in parallel to HD decoders to give users full monitor-wall controls. Interface units are equipped with a browser-based configuration tool for network settings, custom soft key assignment and firmware updates. Full system controls include camera/monitor switching, variable speed PTZ, digital zoom, replay controls, time/date search, jog shuttle, export controls, bookmarks and more...
